

UT FORENSIC ANTHROPOLOGY CENTER PRESENTATION FRIDAY, NOVEMBER 10TH, 2017

Join us for a presentation at the Forensic Anthropology Center located at the University of Tennessee. This center has grown into a leading institution for forensic anthropology research and training. Their resources and facilities include the Anthropology Research Center and a dynamic body donation program.

- The Anthropology Research Facility is the first of its kind to permit systematic study of human decomposition. The 1.3 acres of land made famous by Dr. Bass recently expanded to approximately 2 acres. This addition provides space for studies using advanced technology to quantify how bodies interact with the environment.
- The skeletal collections provide unparalleled opportunities to study modern human skeletal variation, pathology and trauma. The hallmark of these collections is the Bass Donated Skeletal Collection that now consists of over 1700 individuals, the largest collection of contemporary human skeletons in the United States.
- The Forensic Data Bank (FDB) contains data on over 4080 forensic cases in the U.S. and has recently expanded to include contemporary individuals from Central and South America, Europe and Asia. The FDB has been instrumental in documenting changes within human populations.

COST: \$23.00 PER PERSON. This covers transportation from Tellico Village to the facility and back. We will be stopping for a late lunch at The Chop House on our way back. We will be in a private room and is self-pay.

TIME: We will leave Tellico Village Yacht Club parking lot at 11:15 am. Transportation is provided by TLC. The presentation will begin at 12:30 and last approximately 75 minutes.

Deadline for refunds: October 13th.
