

ARTEMIS ~ MOON TO MARS

Friday, June 23 | 1 - 3 pm | Yacht Club

ARTEMIS and NASA'S Marshall Space Flight Center in Huntsville, AL is poised to put new generations of explorers on the Moon by 2024 and establish a long-term human presence there by 2028.

Marshall is leading NASA's Human Landing System Program and the Space Launch System Program. These rockets will get us from Earth to the surface of the Moon and back. While on the surface, NASA and its partners will test and prove all of the hardware they plan will use on Mars. Marshall's Payload Mission Operations Directorate also makes it the premiere center for conducting human-led science in space.

Don't miss this exciting presentation by NASA's Payload Operations Director, Luke Bingaman about how they are combining leadership in engineering, propulsion & technology, and scientific research to create a thriving space infrastructure that will enable future Mars missions as part of the MOON TO MARS PROGRAM..

Registration is Required.
Cost is \$10 Placeholder Fee
Last Day for registration is June 10

Min: 75 ~ Max: 100
